

## Raizon Mar G. Asis

[asisraizon@gmail.com](mailto:asisraizon@gmail.com) | <https://github.com/raizonmarasis-droid> | 09451158805

### Education

---

#### Ateneo de Manila University

September 2024 - Present

B.S. Computer Science - Digital Game Design and Development

- Cumulative QPI : 3.0
- Relevant Coursework : Object - oriented Programming, Data Structures and Algorithms, Software Tools and Development

#### Philippine Science High School

August 2018 - June 2024

- **Timeline:** August 2018 - June 2024 | **Awards:** With High Honors, Director's Lister, World Innovative Science Project Olympiad Gold Medalist

### Skills

---

**Programming Languages & Frameworks:** Python, Java, Javascript, SQL, Django, NumPy, HTML, CSS, C#

**Tools & Platforms:** Git, GitHub, VS Code

**Core Methodologies:** Data Analytics, Data Cleaning & Relational Schema Design, Object-Oriented Programming (OOP), Data Structures & Algorithms

### Certifications

---

#### Google AI Professional Certificate | Google | *July 2026*

- Completed 7 courses demonstrating the ability to apply AI: Brainstorming, Research, Communication, Content Creation, Data Analysis, and App Building.

#### Google Cybersecurity Professional Certificate | Google | *In Progress*

- Foundations of Cybersecurity | Course Certificate | *Completed*

### Independent Projects

---

#### Personal Responsive Portfolio Website | [Github Repo](#) | HTML, CSS

- Built a responsive personal website that auto adjusts for mobile and desktop screens, featuring clean navigation, custom visual effects, and quick links to download my CV and view my LinkedIn and Github accounts.

### Common Grounds Web Platform – Local Events Engine | [Github Repo](#) | *Python, Django*

- Co-developed a modular, multi-application community hub platform utilizing **Django's Model-View-Template (MVT)** architecture.
- Engineered the **Local Events application** from scratch, designing a relational database schema supporting complex many-to-many organizer relationships and state-driven event capacities.
- Implemented state-machine logic to automatically transition event statuses (e.g., automatically locking registrations and flagging events as "Full" upon hitting maximum capacity).

### Console Weather Application | *Java, API, Jackson*

- Engineered an interactive command-line application in Java consuming the OpenWeatherMap REST API to fetch and display real-time weather metrics.
- Integrated the Jackson library (ObjectMapper, JsonNode) to parse nested JSON API responses into strongly-typed Data Transfer Objects (WeatherData).
- Built structured exception handling to manage HTTP status codes (e.g., 404 City Not Found), invalid user inputs, and network failures.

## Experience and Extracurriculars

---

### PAG-ASA - Science Immersion Program | *Data Verification & Automation Intern*

- Handled operation and calibration checks on meteorological instruments (barometers, anemometers, psychrometers) to guarantee absolute data integrity for national weather tracking.
- Analyzed weather data logs and utilized **Python scripts** to parse, clean, and validate environmental datasets for anomalies.

### World Innovative Science Olympiad | *Project Concept Presenter (Gold Medalist)*

- Co-developed the infrastructure and product concept for **ARUGA**, a healthcare platform aiming to aggregate and streamline access to patient historical medical data.
